Paris office, 6 Rue de la Michodière, off Rue d Quatre Septembre (near Place de l'Opéra). The dally and Sunday editions are on sale at Riosque It has been conjectured that the Indes Capucines, corner Place de l'Opéra, and Isthmus of Suez and populated the Klosque 19, Boulevard des Italiens, corner Rue Louis le Grand.

If our friends who faror us with manuscripts for mubilication wish to have rejected articles returned they must in all cases send stamps for that purpose.

For Revenue Only.

The desire of the Democratic party to substitute for the present system a "tariff for revenue only" seems incompatible with its expressed purpose to revise the tariff piecemeal. For the establishment of a strictly revenue tariff piecemeal is a helter skelter method and the result could only be a hodge podge filled with economic inequalities and leaving the amount of national revenue no more than a matter of wild guessing.

We are aware that so-called estimates under the proposed revision of last summer were then submitted, but must decline to accept them because of their total lack of reliability. A tariff that will yield an adequate revenue, enough and not too much, must be a carefully balanced and ingeniously contrived system. An assumption that a certain reduction being made in the rate on a given commodity will be followed by certain increase in imports seems to us a piece of unqualified foolishness. For instance, if 300,000 dozen eggs are imported under a rate of 5 cents a dozen the revenue will be \$15,000. Will imports double, exactly or approximately, if the rate is made 21, cents? If 4,000,000 vards of woodlen cloth averaging \$1.10 a vard are imported at an average rate will be a little more than \$1,000,000. Will maintain approximately the revenue

Moreover, the Democratic theory of vantage or benefit to any particular discrimination would be the imposition of a flat ad valorem rate on all imports whatever their class or kind. That great Democratic ideal the tariff of 1846 discriminated. It put a duty of 100 per cent. out. Judging from present progress in that this city shall be subjected to some derman, Latin, Greek, drawing, music and the per cent. on wines and 30 per cent. on ale he will be unable to find unappropriated and beer. It imposed a 30 per cent. duty on a suit of clothes made of wool and a 20 areas to which he can still retreat. per cent. duty on a hat of the same maof that tariff for revenue only the maker tected only to the extent of 10 and 15 per

An attempt to change radically the present policy by the piecemeal process can only result in serious disturbance of industry and trade and in confusion and uncertainty in national finances. The notion of the greater desirability him and make him the helper of man are of a tariff for revenue only seems to being continued, and there is some enhave its roots in Secretary WALKER'S report of the tariff of 1846, a document regarded by many Democrats as the Many to-day still accept and cling to his

The African Elephant.

The elephant in enormous numbers For generations to come he may be fords to many tribes that relish his flesh. We do not know yet whether it will ever be possible to make him theroughly useful as a draught animal and luggage carrier. The earnest efforts of the last ten years to tame and make him intendent. a good domestic animal have not been largely rewarded. From all we know of his history he seems doomed to extermination unless he can be made use-London at the American and Colonial Exchange, ful, like the Indian elephant, the horse and the ox, for domestic purposes.

The African elephant has a right

to his name, for there is no proof that the Asian variety ever lived in Africa. 12, near the Grand Hotel; Klosque 77, Boulevard dian elephant might have crossed the mountain region of North Africa, where elephants within historic times have been very numerous. The Greek and Roman historians wrote of elephants there, and a little before the Christian era as many as a hundred of them were often exhibited at one time in the Roman circus. There is proof, however, that these animals were of the African variety. The elephant head stamped on many medals and coins invariably had the large cars and the cranial peculiarities which so plainly differentiate the African from the Asian species. Many petroglyphs and pictures on the rock walls of the Atlas Mountains strikingly depicted the characteristics of the African animal. The wild herders of the Atlas Mountains drew their elephant as they saw him, and it was as striking a picture of the African variety of to-day as the rock drawings of the Bushmen which so faithfully outline the animals

of the Kalahari Desert. The elephant no longer exists in North Africa because he has been exterminated by man. Two factors control the distribution of elephants in Africa and the size of their herds. One is the abundance or the scarcity of the plants on which they live; the other is the presence or the absence of man The whites want the elephant for his ivory, and the blacks for his flesh. The elephant seeks new stamping grounds if either the whites or the blacks become uncomfortably numerous.

The result is that from great regions where he was once very numerous he has now entirely disappeared. He has of 25 per cent, ad valorem the revenue been hunted for his ivory in the basin of the Nile till he has wholly disappeared reduction to a 50 per cent. ad valorem from large parts of it. He has vanished rate increase imports sufficiently to from nearly the whole of German East Africa. He is still found in considerfrom that source? We do not know and able numbers in British East Africa. and approaches the coast near the away, and to do that is beyond the power even mouth of the Tana River, for this region of sovereignty, except by proper proceedings to No member of the majority of the Legislais sparsely peopled and hunters seldom that end tariff for revenue only is a theory of an visit it. Then this great region almost to the Zambesi first century before the curtain rises. Then this great region almost to the Zambesi first century before the curtain rises. Then this great region almost to the Zambesi first century before the curtain rises. Then this great region almost to the brack of dancing girls of the second or leave of the second or leave of the second or leave the trick. The sight hazard is not so this great region almost to the brack of the second or leave the trick. The sight hazard is not so the reduction of the sixth century are onto this century before the curtain rises. Then this great region almost to the sound of the sound of the sixth century before the curtain rises. Then this great region almost to the sound of the sixth century before the curtain rises. Then this great region almost to the sound of

In Olympia, where Dorpfeld is still at work, a prehistoric settlement has been found the date of which may be deduced from the pottery remains. These first settlers at Olympia go back at least to the second millennium before Christ. They came from the north, leaving traces of their civilization along the Adviation of the could improve upon his plan, so he said to himself and his women: "Sec, we will take all response to charge if you will be ours and bidding. These other women who please our senses we will make of being S. R. O.," as the atmosphere of the box of the could improve upon his plan, so he said to himself and his women: "Sec, we will take all response to charge if you will be ours and bidding. These other women who bearers for you and ourselves take their weapons of defence from the pottery remains. their civilization along the Adriatic, at of being "S. R. O.," as the atmosphere of the box and by uniting our strength office would have led the innocent to suppose, was about one-third full. Better seats than we had were available when the agencies at a late. The brute women who had who desired to be relieved of people who overran Italy at that time, had were available when the agencies at a late The remains belong to the late Mykenean period, perhaps the thirteenth or twelfth restraint.

take chances. I do not know why one should
